NEW ANTITETANUS SERUM PRODUCED;
NEW PROCESS AT ALCOHOL PLANT

NEW METHOD OF MAKING SERUM -- Borba, No 66, 19 Mar 49

In 30 percent of the cases in which antitetanus serum is administered, a more or less severe serum reaction occurs. If serum is purified to prevent such a reaction, it is not strong enough for its purpose.

Doctors Jezdimir Kusic and Velja Katic, experts at the "Prolek" (Medicine) Pharmaceutical Factory, after 2 years of research, have developed a method of making a strong antitetanus serum which produces a minimum reaction. The serum can be produced in 30 instead of 61 days and is 150 percent more potent than serum made by the old process. Serum of such potency is not mentioned in medical literature and, so far as is known, is not made in any foreign plant. The process discovered by Doctors Kusic and Katic was previously unknown to science.

ALCOHOL PLANT IMPROVES PROCESS -- Borba, No 72, 26 Mar 49

Kotor -- The "Vrmac" Combine, of local significance, fulfilled its March production plan on 24 March and its plan for the quarter by 107 percent.

The workers themselves have built a reservoir for alcohol. By pouring water that has already been heated into the cauldrons instead of heating it with the syrup, they have accelerated the process of boiling syrup by 400 percent.

The combine has not yet been assigned selling prices for its products. In the meantime, finished goods occupy all the storage space and are overflowing into the working area.
